# Personal Data Blade

is a computer program which translates a Facebook™ profile into a customized Dagger

1 - The program takes your personal Facebook™ archive as **Input**.

2 - It analyses the **Facebook Data** and plugs it into some variables.

3 - Each variable is linked to a parameter in order to create a virtual 3D object: a **Dagger.**

4 - It **Outputs** your customized dagger, which can then be 3D printed.
